

# CLEANCAIRE™

THROUGH KLEARZONE TECHNOLOGY

## Why KlearKube?

*Designed and built with maximum room pathogen disinfection performance in-mind. The latest offering from Cleancaire™ brings you quality, ingenuity, and cost-effective solutions for killing 99.9% of airborne-and surface-bound pathogens such as bacteria, viruses, and mold in a compact cube. The system uses the same patented, Klearzone™ amalgamated catalyst technology of its bigger brother (KZ244) that turns ozone into pure breathable oxygen.*

*This patented technology is the first of its kind and offers a cost effective, broad-spectrum room disinfection solution. It uses all UL certified electronics and controls, and KlearKube even illuminates itself in red as a visual indicator when the facility or room is being disinfected. This small unit goes one step further than just destroying airborne contaminants; it also disinfects surfaces while removing residual ozone and oxides of nitrogen from the treated environment.*

*The treatment time for disinfection is approximately 4 hours from start to finish, at which time the room will be cleansed of harmful pathogens, contaminants, and odors. This is a significant reduction over typical 10-12 hour disinfection cycles to disinfect and allow ozone to dissipate to safe levels between patrons or hospital patients.*

## ***KlearKube – Incorporating Klearzone technology***

*KlearKube not only kills viruses such as COVID-19, it addresses other health hazards including mold, pollen, and hazardous levels of ozone and oxides of nitrogen (NOx). Unlike any other disinfection systems available, Klearzone™ technology safely removes oxides of nitrogen and ozone in the air that might otherwise harm humans and animals.*

*KlearKube is ideal for those applications where you need piece of mind that air and surfaces are disinfected and free from contaminants. It outperforms, comparably priced systems and is available for immediate sale.*

- KlearKube is perfect for the home, RV or boat
- Easily treats businesses during off hours with work surfaces that need to be free from germs and viruses such as offices with keyboards, printers, and fax machines.
- Use in mobile transit applications to quickly disinfect train cars, subways, and buses.
- Sanitize hotel rooms, cruise ship cabins, hospital rooms and gym locker rooms between guests and patients.
- Eliminate odors in automobiles and even kill hard to treat mold in automobile air conditioners for the automotive detailing business.

*This portable mobile offering is the next generation in air purification in a small size. Purchase your KlearKube today to start protecting you, your friends, customers, clients and family from airborne and surface pollutants, odors and pathogens that cause illness and disease.*
